Shore System

A range of accessories have been developed to make handling boats ashore and at the water's edge as easy as possible

Pontoon System
Originally conceived as part of the fully transportable package comprising sailboats, inflatable safety boat, modular dock, crane and trailer, the Hansa Pontoon System:
* Enables Hansa keelboats to operate easily from a beach or lake shore
* Is easily and quickly assembled and dismantled for storage and transport
* Is available in two systems - the "T" Dock and "H" Dock

C-Crane
The Hansa C-Crane was developed to fill the need for an inexpensive transferring aid for the marine environment - not only for getting sailors with a disability afloat, but also for lifting centreboards in and out of boats. The crane is also suited to many other lifting applications including small dinghies, outboard motors, anchors etc.

The C Crane can be fitted to existing pontoons, docks, and jetties and is fitted with a reel type braked winch and tested to a Safe Working Load of 120 kg (ISO/DIS 10535) and fall arrester. Lifting slings are available to transfer sailors to and from wheelchairs. Two stainless steel C-Crane models are available - the Flush Mount (socket is below deck level) and Stand Mount (easily retrofitted to existing structures).

Shore Shuttle
The Hansa Shore Shuttle is helpful tool for moving 2.3, 303 and Liberty boats around on shore. One size fits all and a single shuttle can support a fleet of up to ten boats.

Keel Caddy
The Hansa Keel Caddie is designed to safely and easily transport multiple 2.3, 303 centreboards, or a Liberty centreboard, from storage to the water.

Trailers
A range of trailer configurations are available. Contact your nearest Hansa Sailing distributor for more information.
